

# AI and Gen AI: The new AML Superpowers

Trevor Barritt, Financial Crime and Compliance Expert

---

Banking Renaissance Conference, Amsterdam 9 February 2024

# AGENDA

**Understanding the superpowers of predictive and generative AI in AML compliance**

**Practical use-cases in this superpower**

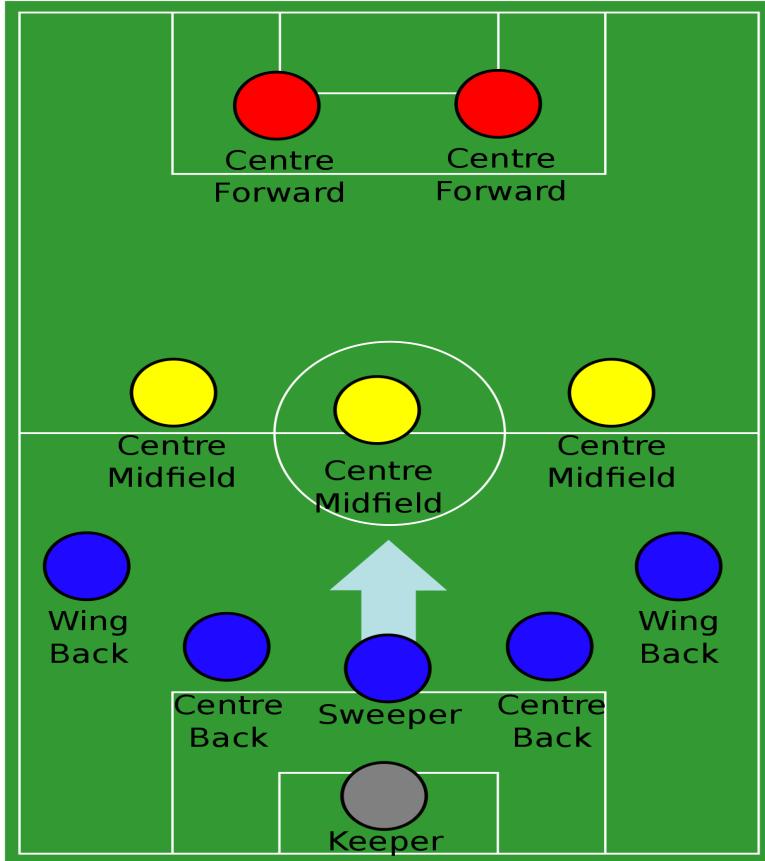

**Where to next – the evolution of AI in anti financial crime**

**Q&A**

# Where to place Machine Learning?

**It's not just about  
False Positive  
Reduction.**

**It's also about finding  
the unknown.**

# Why predictive AI and gen AI?

- Uses **advanced machine learning & data analysis techniques** to **forecast and identify potential instances** of illicit financial activities or fraudulent behaviour before they occur
- Leverages **historical data patterns, transactional information**, and various risk factors to proactively assess and **predict suspicious or high-risk transactions**

**'PREDICTIVE AI'**

- Category of AI techniques that **generates new and original data and content**
- Uses **large language models** and **large action models** to **learn the patterns and structures** of existing data and then use this knowledge to create new data and content and ring this content to the forefront for easy consumption.

**'GENERATIVE AI'**

# How the superpower works

----- Value / Benefit -----

Reduce  
false positives

Increase  
productivity & outcomes quality

Decrease  
costs and time spent on tasks

Enhance  
risk assessment and alert triage

Create  
case summary notes, reports &  
narratives

Present  
holistic views

Surface  
threats and new risks

Prompt  
next actions

Summarise  
customer & transaction information

Draft  
disclosure narratives and reports  
+ auto submit

----- Capability -----

Process & interrogate  
vast amounts of data

Automate  
processes, workflows, responses

Identify  
patterns & behaviours

Predict  
using historic data, actions,  
newly found patterns

Collate, Search, Retrieve  
data from internal & external sources

Generate  
text, store files, notes & narratives

# Where to next

## AI EVOLUTION CONTINUES

DETECT ALL GENUINE RISK

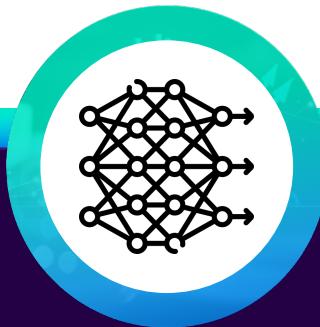

DRIVE EFFICIENCIES

ENHANCE AGILITY

DRIVE COLLABORATION

AML  
(TM, KYC/CDD,  
Screening,  
Sanctions etc)  
Fraud

Digital  
Assistants

AI  
Forensics

Intelligence  
Sharing

A single, enterprise-wide solution for all your investigative needs

**Sensa Investigation Hub** is detection agnostic and configurable to any use case, business unit, or asset class

# Introducing

# Sensa Investigation Hub

## powered by generative AI

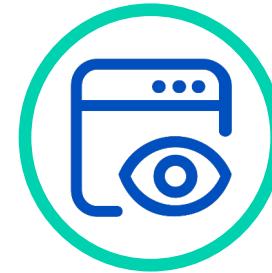

Accelerates investigations by ~70%

Works seamlessly alongside your existing solutions

Entity-centric investigation

Enterprise-wide risk management

Auditable decisioning and reporting

Q&A

[Symphonyai.com](https://Symphonyai.com)

# Panel Discussion

- What steps need to be taken to enhance oversight and reporting systems to meet the required standards?
- Is increased collaboration between financial institutions and regulatory authorities deemed essential?
- Is it possible for strong AML systems to mitigate emerging threats while maintaining high standards of customer service?
